ABOUT COMPANY

Nirmal Industries was founded by Nirmal Singh Rehal. He started the firm for more than 30 years ago with a small shop. Nirmal Industries have made its roots into the manufacturing and engineering of tools and equipments and providing excellent services to the customers.

Having such a vast industrial experience we are equipped with manufacturing machines such as 4- HI Cold rolling mill, Slitting Lines, Cut To Length Lines, Coil Car, Coil Handling Equipment, Industrial Gear Boxes and other satellite products also. Have a look for some of our products manufactured.

- It has been a complete engineering and manufacturing facility.
- Our site is equipped with a complete machine shop, large assembly floors with a complete set of engineering tools and equipments.
- Nirmal has supplied hi-tech equipment to major core sectors steel, sugar and automobile.
- Our commitment to excellence and delivering complete solutions to our customers has helped us to become the market leaders in our engineering business.
- We test the equipment to the customer's satisfaction before delivery.
- We deliver high quality products and essential solutions to our customers.

Infrastructures

We have a modern manufacturing facility in the Ghaziabad, on the outskirts of New Delhi. Well-connected to major Indian highways, railways and airport, our plant are ideally located for expeditious procurement and delivery of raw material and final products. The unit is well equipped with latest machinery and an assembly shop that has all modern machinery. All components that go into our machines are made out of best metals in our own facility. This ensures the quality of the parts and components and in turn the finished products. A team of highly experienced professionals who have vast experience in own their domain of functioning are in charge of the plant.

Team

Competent professionals, qualified engineers, talented quality experts and a highly skilled workforce are the prime assets of our organization. With a complete focus on quality and customer satisfaction, our total workforce is aligned in one common objective. Our valuable human resources are nurtured with skill enhancing trainings so that they are able to actualize what they are worth of.

OUR PRODUCTS

We manufacture and export slitting lines that are designed to slit all types of thin gauge strips to extremely close tolerances. These lines basically consist of coil handling, strip processing and scrap management equipment.

We are engaged in manufacturing and supplying of cut to length lines. Our lines are equipped with the latest electronic controls for achieving highly accurate lengths of sheet and can be customized to suit specific requirements.

Our roll forming machine specializes in the production of colored steel tile, colored steel tile equipment, colored steel tile machinery, antique glazed tile line, roof load bearing line, compound board line on the basis of normal roll forming machine

Our cold rolling mills are used for deforming various metals by passing them through rollers at a temperature below its re-crystallization temperature.

We manufacture and supply coil handling equipments of good quality and precision. Our coil handling equipments minimizes coil change over time and maximize coil loading capabilities.

We manufacture, supply and export Pinch Roll and Universal Shaft that are effectively used between roughing mill and intermediate finishing mill. Our Pinch Rolls are made up of industrial grade raw material, which is resistant to corrosion and abrasion.

The Helical Gearbox Housing is usually made of Close Grain Cast Iron. Sometimes Housing is also offered in Structural Steel when the application demands. They are rugged, corrosion resistant and absorb shock and vibration.

Planetary Reduction Gearbox consist of an Internal toothed Ring Gear to which are set 3 Planets mounted on the Planet Carrier engaging also with the Sun Gear (Pinion) and reduced output speed is taken through Planet Carrier and Ring Gear is remain stationary.

Levelling roll units consist of Extension Roll unit(s) and Anti-Cambering Roll unit(s) which produce dead flat strip with a unique roll arrangement to

We are specialized in recoiler design and production. The overhung expanding drum type tension reels will be designed to wind the strip into a tight coil. Our recoiler is of high productivity and speed, easy main-

We are the leading manufactures and exporters of high quality industrial gear couplings, rigid gear couplings. It offers a broad portfolio of product with excellent technical support for installation and troubleshooting.

THANK YOU
